GENERAL INFORMATION

REVOLUTION is a new surfactant chemistry specifically designed for optimization of rootzone moisture and maintenance of fine turf performance.

REVOLUTION is recommended for use on fine turf-grasses such as those found on golf courses, athletic fields, and other highly maintained areas. REVOLUTION will improve rootzone moisture distribution, particularly under stress conditions as a result of high evaporative demand. REVOLUTION will ensure efficient water use and maximize turf quality under stress conditions.

REVOLUTION may be safely applied at any time during the growing season.

DIRECTIONS FOR USE

Standard Program: Apply 6 fl oz/1000 ft² of REVOLUTION in 2 gallons of water (185 ml/100m² in 8 L of water). Apply monthly beginning at least one month prior to the onset of stress conditions. For best results, apply at least 1/3 inch (7.5 mm) of irrigation after application. If runoff or puddling occur, water in using cycle/soak runs until 1/3 inch (7.5 mm) is achieved. Irrigate before next mowing.

TANK MIXING

REVOLUTION can be safely applied in a tank mix with a range of commonly used turf chemicals and fertilizers at rates not exceeding 6 fl oz. NOTE: Tank mix combinations containing REVOLUTION have not been tested on all varieties of every turfgrass species or under all possible growing conditions. If user is unfamiliar with the performance of REVOLUTION in tank mixes under user's growing conditions, a limited area of turfgrass should be tested prior to large-scale application. The user should always exercise reasonable judgment and caution when using this and all other turf products.
